Focus

AI agents

LLM / API

Automation

Skills

AI & documents
AI agents, custom skills, Claude Code, Codex, LLM APIs, OCR.

Development
JavaScript, TypeScript, React, Next.js, Supabase, REST APIs, Git.

Requirements gathering, output review and calculation validation.

Education

Information Systems and Programming

Moscow University for Industry and Finance · Vocational diploma · 2025

Frontend Development

Yandex Practicum · Course · 2023

Profile

I develop web applications with language models and automate document and reporting workflows. I take tasks from requirements gathering through interface development, LLM API integration and validation.

Experience

AI Implementation & Automation Specialist

AKZ Pokrytiya LLC · May 2026 — Present

Document analysis and material estimates. Built an application that extracts requirements from PDFs, helps select materials and calculate costs, and exports results to Excel.

AI agents. Configured a developer-orchestrator, designer and reviewer, defining their roles, task handoffs and change reviews. I create custom skills for work tasks and preserve project decisions across sessions.

AI within applications. Integrate language models (LLMs) through APIs so employees can work with documents and review AI responses in one interface.

Reporting for management. Created an AI agent that compiles and updates an Excel accounts receivable report from multiple spreadsheets. The manager has tried the agent; I am continuing to refine it.

In development. A corporate website with a product catalog for the company’s international representative office.

Earlier experience

Mobile app startup · Apr–Oct 2025 · Remote.
Published apps on the App Store and Google Play and set up monetization and paid subscriptions. Used AI to prepare descriptions and translate store listing text into multiple languages, including screenshot headings.

Freelance frontend development · Dec 2022–Dec 2024.
Built websites for desktop and mobile using JavaScript, React and WordPress.
