JavaScript, TypeScript, React, Next.js, Supabase, REST APIs, Git.

Requirements gathering, output review and calculation validation.

Education

Information Systems and Programming

Moscow University for Industry and Finance · Vocational diploma · 2025

Frontend Development

Yandex Practicum · Course · 2023

Profile

I build AI tools for working with documents, calculations and reporting.

Experience

AI Implementation & Automation Specialist

AKZ Pokrytiya LLC · May 2026 — Present

Document analysis and material estimates. Built an application that extracts requirements from PDFs, helps select materials and calculate costs, and exports results to Excel.

AI agents for software development. Configured AI agents to write code, design interfaces and review changes. I create custom skills: instructions for specific tasks.

AI within applications. Integrate language models (LLMs) through APIs so employees can work with documents and review AI responses in one interface.

Reporting for a company director. Created an AI agent that updates an accounts receivable report using data from multiple spreadsheets.

In development. A corporate website with a product catalog for the company's international representative office.

Earlier experience

Mobile app startup · Apr–Oct 2025 · Remote.
Published apps on the App Store and Google Play and set up monetization and paid subscriptions. Used AI to prepare descriptions and translate store listing text into multiple languages, including screenshot headings.

Freelance frontend development · Dec 2022–Dec 2024.
Built websites for desktop and mobile using JavaScript, React and WordPress.
